Professional Summary

Bachelor's degree in Systems Analysis and Development, with experience in Business Intelligence and Data Analytics, working on the development of analytical solutions and the transformation of data into strategic information to support decision-making. Responsible for building and maintaining indicators, automating and optimizing processes, integrating and standardizing databases, as well as developing corporate applications and solutions aimed at increasing operational efficiency.

Experience in requirements gathering, KPI definition, and stakeholder interaction, translating business needs into scalable and data-driven solutions. Background in industrial automation, with strong analytical thinking and a focus on continuous improvement.

Technical Skills

- **Programming Languages:** Python (Pandas, NumPy, Matplotlib), SQL (PostgreSQL, MySQL, SQL Server).
- **BI & Visualization:** Power BI (DAX, Data Modeling, Dashboards), Excel, Microsoft Power Platform, Figma.
- **Data & Analytics:** ETL, Data Cleaning, Data Processing and Modeling, KPI Definition and Monitoring, Exploratory Data Analysis.
- **Tools & Technologies:** Git/GitHub, Jupyter Notebook, Linux.
- **Systems:** Knowledge of ERP/WMS systems and data management on Elaw and EnSpace platforms.

Education

- **Unicesumar – Systems Analysis and Development**
Graduation: December 2025
- **English:** B2 (Advanced – Conversational) – Technical reading, writing, and functional communication.

- **Spanish:** A1 (Basic) – Introductory reading and comprehension skills.

Professional Experience

Enlighten – São Paulo, SP (Remote)

Position: Data Assistant | **Period:** February 2026 – Present

Responsibilities and Achievements

- **Business Intelligence (BI) Solutions Development:** Creation, maintenance, and publication of Power BI dashboards using dimensional modeling, DAX measures, and advanced visualization features to monitor KPIs and support decision-making.
- **Microsoft Power Platform:** Development and maintenance of corporate applications in Power Apps, data integration, and process automation using Power Platform resources, ensuring greater operational efficiency and standardized workflows.
- **Data Transformation and Modeling:** Processing, consolidating, and integrating data from multiple sources through Power Query and Excel, ensuring data quality, consistency, and reliability.
- **Process Automation and Continuous Improvement:** Restructuring spreadsheets and operational workflows, implementing business rules and validations, and reducing manual activities, contributing to increased team productivity.
- **Systems Administration and Data Governance:** Managing information on corporate platforms, controlling access and permissions, and ensuring the integrity of data used in projects.
- **Stakeholder Management:** Gathering requirements from business areas, defining and monitoring KPIs, presenting results, and continuously improving developed solutions.

Key Achievements

- Development and support of solutions using Microsoft Power Platform (Power BI, Power Query, and Power Apps), providing greater agility and reliability in information analysis and management.
- Process automation and reduction of manual work through the implementation of applications and improvements to operational workflows.

- Consolidation and standardization of databases, increasing information quality and analytical efficiency.
- Delivery of strategic dashboards and KPIs for performance monitoring and decision support.

Ribeiro do Valle – Guaxupé, MG

Position: Assembly and Quality Assistant | **Period:** September 2023 – February 2026

Responsibilities and Achievements

- Led a production line improvement project, reducing cycle time through critical analysis.
- Developed a customized Excel system for inventory control and cataloging, improving data accuracy.

Results Achieved: Increased production efficiency through reduced assembly cycle time and implementation of a data organization culture for inventory management using Excel.

Cooxupé – Guaxupé, MG

Position: Automation Operator | **Period:** June 2019 – May 2023

Responsibilities and Achievements

- **Data Flow Management (WMS):** Managed and verified data within the WMS system, ensuring logistics information integrity and operational efficiency.
- **Problem Analysis and Resolution:** Performed critical analysis of automation system failures, identifying root causes of technical issues and reducing production bottlenecks.
- **Development of Support Tools:** Created Excel spreadsheets and reports to support team decision-making and monitor performance indicators.
- **Process Optimization:** Continuously monitored automated systems to optimize production and logistics processes.

Results Achieved: Reduced operational bottlenecks through agile resolution of technical issues and improved data visibility for the team through Excel-based tools.
